

FIXING SYSTEMS

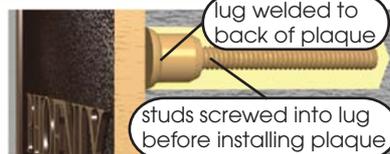

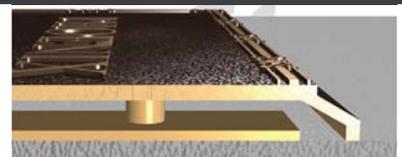

Bronze plaques are normally mounted on a wall, base or other structure. Many systems are available to ensure a practical, safe and permanent fixing is achieved.

The fixing system required should be specified when the plaque is ordered. The cost of Phoenix Foundry standard fixing systems are included in the price of the plaque.

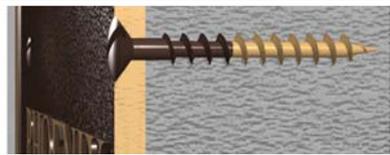

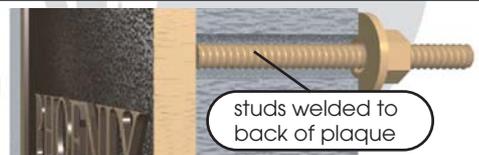

< **Flat Black** - Used for standard Burial plaques on beams or bases and cremation plaques on curbs, rocks or other horizontal or sloping surfaces. The plaque is provided with a flat back to be glued to the supporting structure with a suitable adhesive such as silicone.

> **Glue-able Strip** - Elite plaques on beams, bases or walls use this fixture. Plaques with irregular backs are fitted with strips to provide sufficient flat surface for gluing.

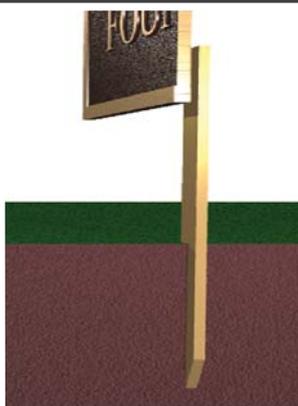

< **Lugs and Studs** - Used with standard burial plaques on beams or bases and cremation plaques on curbs, rocks or walls. The number and location of lugs is dependant on the size of the plaque and base structure requirements. Lugs with threaded studs are cast on or welded to the back of the plaque. The threaded studs (supplied separately) are screwed into the lugs. Studs are placed in holes drilled in the base structure and fixed with adhesive.

> **Studs** - Used to fix plaques to hollow walls. Brass pins or studs (4.5mm diameter) are welded directly to the back of the plaque and supplied with washers and a nut.

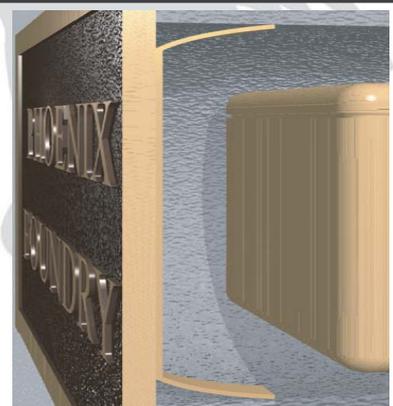

< **Screws** - Screw fittings will facilitate easy removal and replacement. Brass screws placed in holes drilled in the plaque are used to fix the plaque to the base structure. Screws can be supplied with countersunk, round or ornamental heads which will be painted in the same background colour as the plaque.

> **Stake** - Support for cremation plaques placed in gardens or under trees. The plaque is fitted with a bronze stake suitable for placing in the ground.

> **Straps** - For cremation plaques fitted to niche walls. Bronze straps are welded to the back of the plaque which are designed to lock into a niche wall. A range of designs are available to fit any sized niche. Some designs also grip the ashes container when placed in the niche.

Contact Phoenix Foundry to ensure the fixtures for your plaque are compatible with the base structures placement, spacing and dimension requirements .
